

# River Basin Management Cycle Training Series

## 05 - Design/ Adaptation of Monitoring Networks and Programmes

Implemented by

**giz** Deutsche Gesellschaft  
für Internationale  
Zusammenarbeit (GIZ) GmbH

**GNANAMI  
GANGE**

# Outline

| Unit | Topic   |
|------|---|
| 1    | <b>Introduction to River Basin Management</b>   |
| 2    | <b>Clear Governance and Coordination Structure</b>                                    |
|      | <i>Governance (legal aspects and framework)</i>                                       |
|      | <i>Basin Coordination Structures (basin institutions and stakeholder engagement)</i>  |
| 3    | <b>Basin Characterisation</b>   |
|      | <i>DPSIR Assessment</i>   |
| 4    | <b>Determining Basin Vision and Objectives</b>  |
| 5    | <b>Design/ Adaptation of Monitoring Networks and Programmes</b>                       |
| 6    | <b>Assessment of Water Quality and Quantity</b>                                       |
| 7    | <b>Implementation of RBM</b>  |
|      | <i>River Basin Plans and Programme of Measures (PoM), Financing and Review of PoM</i> |
| 8    | <b>Solutions through Exchange, Information Flow and Cooperation</b>                   |

# 5 Monitoring Programmes

Implemented by

**giz** Deutsche Gesellschaft  
für Internationale  
Zusammenarbeit (GIZ) GmbH

**GNAMAMI  
GANGE**

# The River Basin Planning and Management Cycle

„Inner cycle“  
Technical/  
operational level“

„Outer cycle“  
Planning and  
decision making  
level

# Rationale for a Monitoring Programme

## Annex II and V of the EU WFD

Characterisation

Description of the river basin

Identify pressures

Annex II

Assess Risk from pressures

Monitoring

Annex V

Develop monitoring and classification system

Monitor to check risk assessment

Monitor to assess status

Monitor to assess effectiveness of measures

# Monitoring Programmes

- “Monitoring programmes are required to establish a coherent and comprehensive overview of water status within each river basin district.”
- **Monitoring information from surface and groundwater is required for:**
  - The classification of status (biological, chemical and hydromorphological/ quantity for groundwater)
  - Validating the risk assessment
  - Assessment of long-term changes from natural conditions and resulting from anthropogenic activities
  - Estimating pollutant loads
  - Identifying reasons for failure to achieve environmental objectives

Source: European Commission (2003) Guidance Document No. 7: Monitoring under the WFD

# Relevance of Basin Characterisation and Monitoring for Policy Dialogue

- Basin characterisation and monitoring is a complex undertaking → Requires the consideration of hydrology, hydro-morphology, chemistry, and biology to assess the overall status of water resources
- All this makes the undertaking of basin characterisation and monitoring a **labour-intensive, time consuming** and **costly** activity → Thus, the following needs to be carefully established:
  - The scope of the characterisation
  - Division of roles and responsibilities among the various stakeholders involved
  - In addition to securing **sustainable financing mechanisms**
- Monitoring programmes (according to the WFD) are derived from/ aligned with the risk assessment (DPSIR) to achieve cost-efficient design

# What is Needed for the Design and Adaptation of Monitoring Programmes

- Development of a monitoring programme and observation grid within the river basin
- Assessment of the current water quality
- Assessing options of environmental remediation
- Identify shortcomings of regulations and protection provisions
- Data to calibrate and run models

# Monitoring Parameters and Methods

Many of the monitoring methods applied for basin characterisation and assessment are also used for monitoring → **Those include:**

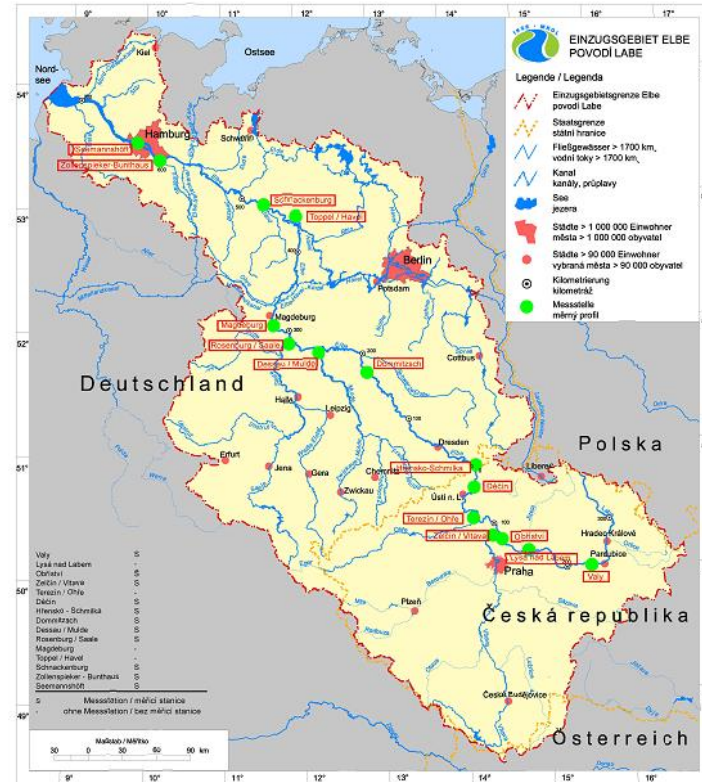

- Hydrological parameters
- Water quality parameters
- Biological parameters

**Additional methods which could be employed include:**

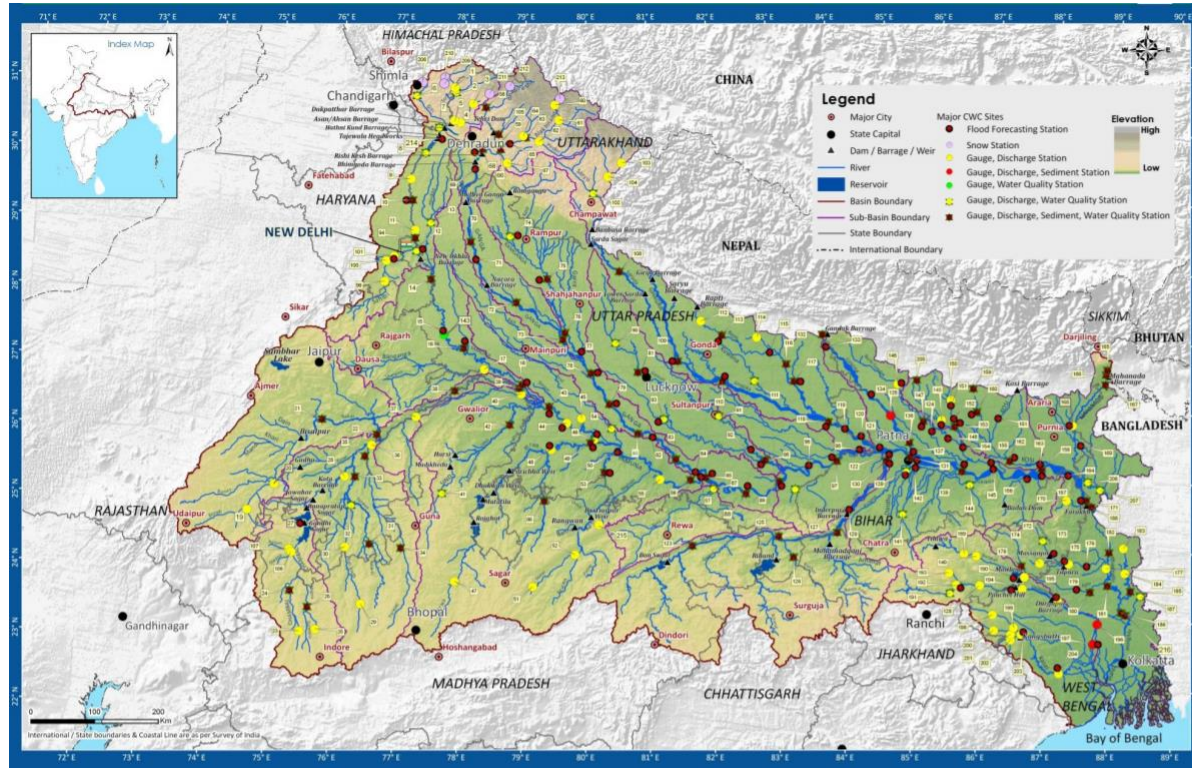

- Telemetric Monitoring Systems
- Remote Sensing
- Geographic Information Systems (GIS)

# The International Commission for the Protection of the Elbe River (ICPER) – Monitoring Networks and River Transects

The water quality within the framework of the International **Elbe Monitoring Programme** 2019 is monitored at 9 monitoring profiles in Germany and 6 monitoring profiles in the Czech Republic (10 directly at the Elbe and 5 at tributaries).

# Example: in the Ganga basin – Monitoring Networks

Source: Ministry of Water Resources (2014) Ganga Basin

# Example: in the Ganga basin – Monitoring Networks

## Example: Surface Water Quality

- 36 Real Time Water Quality Monitoring Station (RTWQMS) are operational
- Water quality monitoring is carried out 130 locations
- Dissolved Oxygen levels improved at 39 locations, Biological Oxygen Demand (BOD) decreased at 42 locations and coliform bacteria count decreased at 47 locations (2017 vs 2018 data).
- Bio-monitoring of river Ganga at various locations (Haridwar to Diamond Harbour in West Bengal) has been carried out to study the Benthic Macro Invertebrates, which reflects the biological health of river

& Ganga Rejuvenation

National Mission for Clean Ganga

## Real Time Water Quality Monitoring of River Ganga

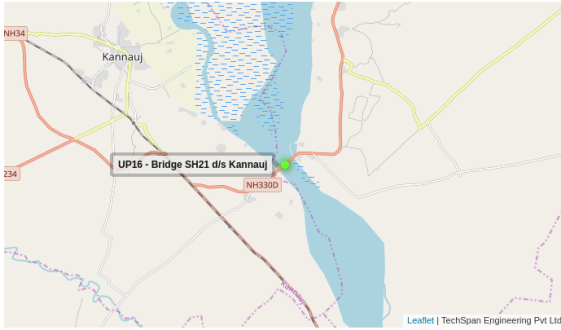

**State:** Uttar Pradesh **UP16 - Bridge SH21 d/s Kannauj**

**Fit for irrigation (when meeting criteria limits of pH 6 to 8.5 & Electrical Conductivity < 2000 µm/cm)**

**Fit for propagation of wildlife and Fisheries (when meeting criteria limits of DO ≥ 4 mg/l, pH 6.5 to 8.5 & Free Amonia ≤ 1.2 mg/l)**

**Fit for drinking water (raw) sourcing for conventional treatment (when meeting criteria limits of BOD ≤ 3 mg/l, DO ≥ 4 mg/l & pH 6 to 9)**

**Fit for Bathing (when meeting criteria limits of BOD ≤ 3 mg/l, DO ≥ 5 mg/l & pH 6.5 to 8.5)**

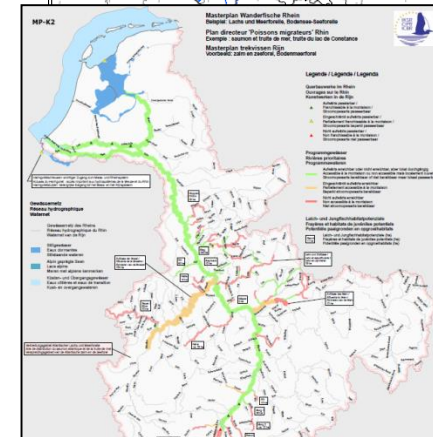

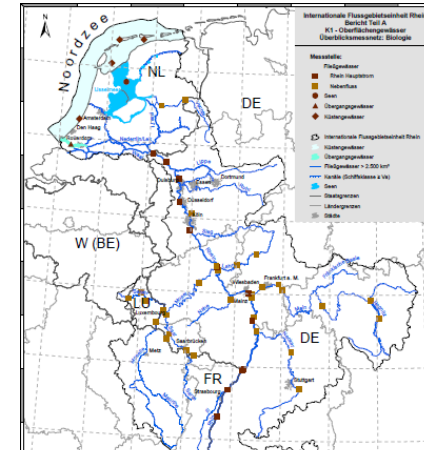

| Parameters  | Criteria limit (River) | Observed Value |
|-------------|------------------------|----------------|
| BOD         | ≤ 3 mg/l               | 3              |
| DO          | ≥ 5 mg/l               | 7.75           |
| EC          | < 1000 µm/cm           |                |
| pH          | 6.5 - 8.5              | 7.91           |
| Temperature | ≤ 35°C                 | 22.7           |
| Ammonia     | ≤ 1.2 mg/l             | 0.82           |
| Chloride    | < 250 mg/l             |                |
| COD         | < 10 mg/l              | 9              |
| TSS         | < 10 mg/l              | 9              |

# Joint Monitoring in the Rhine River Basin

## ICPR monitors:

- State of the river and changes of it (flow, quality, hydromorphology, biodiversity, etc.)
  - Specific issues countries have identified as priorities (e.g. salmon migration)
  - Nationally implemented measures and their effects (on improvement of state of the river)
  - Compliance with specific joint decisions that have been taken (implementation/lack of implementation) of specific measures – example Haringsvliet Sluices)
- Done on the basis of national data, national and regional analyses, inputs from scientific community and civil society
- Provides comprehensive picture of the state of the river and the effectiveness of measures implemented

# Data and Information Management in the Danube River Basin

## In the Danube River Basin, data acquisition and analysis includes:

- Danube Basin Analysis (state of the basin, human activities, impacts, economic water use)
- Identification of pressures in DRBMP – basis for identification of specific monitoring needs
- Trans-National Monitoring Network (TNMN) with specific parameters
- Specific monitoring efforts (Joint Danube Survey)
- Mechanisms for sharing data between ICPDR member countries (DANUBIS)
- Mechanisms for sharing analyses results with other actors and the general public

→ Data and analyses are the basis for science-based and informed decision-making

Table 1: List of monitoring sites

| No. | Country code | DEFF Code | New TNMN code | River       | Name of site      | Location | x-coord | y-coord | River-km | Abste-de | Catchment |
|-----|--------------|-----------|---------------|-------------|-------------------|----------|---------|---------|----------|----------|-----------|

FIGURE 25

# Exercise: Assessment of existing Monitoring in the Ganga

## Objective of the exercise:

- Participants exchange and discuss their perspective on existing Monitoring Networks and Programmes in the Ganga.

Assess the monitoring programme which exists for your (sub-)basin while considering the following:

- From your group point of view, does the current Monitoring Network and Programs help in your daily work, your assessment and decision-making?
- Does it need to be improved? If yes, please detail.

IT'S YOUR TURN

## Continued engagement pre and post webinar

1. For queries and related engagements contact GIZ colleagues:

### Delhi Office:

- Dr. Sumit Gautam ([sumit.gautam@giz.de](mailto:sumit.gautam@giz.de))
- Ms. Chhavi Sharda ([chhavi.sharda@giz.de](mailto:chhavi.sharda@giz.de))

### Uttarakhand (Dehradun) Office:

- Mr. Merajuddin Ahmad ([merajuddin.ahmad@giz.de](mailto:merajuddin.ahmad@giz.de))

2. E-Learning platform - <http://78.46.247.119/>

( Temporarily hosted on AHT servers and will be transferred to the servers of training institutes.)

Contact: Rania - [taha@aht-group.com](mailto:taha@aht-group.com)/ Rebecca - [roblick@aht-group.com](mailto:roblick@aht-group.com)
